

ASSENT FORM

Title of Project: 'Happyr Tracking': Feasibility of a developmentally-tailored mobile app for tracking mood and pain in children with migraine

Name of Principal Investigator (the Researcher): Dr. Munni Ray

We are doing this research study to test how Children and Young People like the Happyr App, an app that helps with managing migraine.

If you decide to take part in the study, you will be asked to use the app for eight weeks which would include keeping a daily mood diary (max. 2min per day), keeping a diary about your migraine symptoms, and answering two short surveys in the app (one at the start and one at the end of the study).

There are some things about the study you should know. You can read about them in detail in your Participant Information Sheet. In the event that you share something with us that you are concerned about, we have a clinical psychologist in our research team who you can talk to you about this.

There might be some benefits, something good that happens, if you take part but we cannot promise that. We believe that the benefits might be that you understand more about your pain and learn how to deal with difficult emotions.

When we are finished with the study, we will write a report about what we learned. In the report, we will not show your name or tell others that you were part of the study.

You do not have to be in this study if you do not want to be. If you decide to stop after we begin, that's okay too. Your parents know about the study too. If you decide you want to be in this study, please sign your name. We will write our name too. This shows we have talked about the research and that you are happy to take part.
